

## SAP Practice

# SAP Development Capabilities

SAP implementations oftentimes require client-specific application development and customization. Whether a project is enhancement driven, interface related, data conversion or a customized “bolt-on,” COMSYS’ experienced SAP technical consultants are here to assist you. Our highly trained developers possess a broad range of SAP programming skill sets, with the majority having over five years of onsite client engagement experience.

Some of COMSYS’ technical SAP development core competencies include:

- Enhancements: User-Exits
- Forms: Smartforms/SAP Scripts/Adobe
- Customized Reporting: ALV, Classical
- Portal
- Interfacing: ALE/IDOC, EDI, XI, File-Based
- Dialog Programming/GUI
- Data Conversion: LSMW, BDC
- “Bolt-Ons”
- Work Flow
- J2EE/Java

COMSYS’ ERP SAP solutions practice maintains the highest level of technical standards utilizing industry “Best Practices” and the latest SAP tools. Our technical consultants possess vertical market specializations that serve to differentiate us from the competition. And, they are well aware of the uniqueness of each client environment, always striving to provide you with the

### ABOUT COMSYS

best product specific to your business needs. What’s more, our certified ABAP, Workflow, Portal and J2EE/Java programmers provide the necessary technical support and development skills required in business-process-driven implementations.

COMSYS, an SAP-Certified “Services Partner,” in addition to its strong technical consultants and applications developers, possesses a staff of senior technical managers with a wealth of knowledge and experience capable of planning and delivering development efforts using SAP’s Accelerated SAP (ASAP) Methodology combined with Project Management Institute (PMI) Best Practices.

Do business. **We’re IT.**

## SAP Practice

Our adherence to industry Best Practices involves providing our clients with valuable design deliverables that include a comprehensive audit trail. A major component within any SAP development project life cycle is thorough documentation. This important and time-consuming task is often neglected, but failing to do so can result in unforeseen challenges in the future. COMSYS understands the value and the need for quality documentation, and our technical writers can assist with the documenting process if need be.

In addition to providing thorough documentation, various phases of rigorous testing are needed to ensure a successful SAP development effort, which include: Single Development Unit Testing, Multiple Component String Testing, Integration Testing, and User Acceptance Testing. The amount of testing varies for each project and takes into account client time constraints, budgets and resources available. We ensure, however, that your SAP development project is not complete without proper validation.

And, finally, COMSYS can provide you with alternatives as to how and where your SAP solutions are developed, with offshore and Business Outsource (BPO) capabilities via our state-of-the-art SAP Technology Centers in Bangalore and Trivnadrum, India. As an alternative to our onsite development model, COMSYS maintains a comprehensive offshore talent pool that is proficient in a multitude of SAP-relevant programming technologies.
